## About *Research Connections*

These data are made available by the Child Care and Early Education *Research Connections* (CCEERC) project, which promotes high quality research in child care and early education and the use of that research in policymaking. Our vision is that children are well cared for and have rich learning experiences, and their families are supported and able to work.

*Research Connections* is supported by the Child Care Bureau, Administration for Children and Families of the United States Department of Health and Human Services through a cooperative agreement with the National Center for Children in Poverty, Mailman School of Public Health at Columbia University, and its partner, the Inter-university Consortium for Political and Social Research, Institute for Social Research at the University of Michigan.

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to

## INTRODUCTION

The National Household Education Surveys Program (NHES) was developed by the National Center for Education Statistics (NCES) and incorporates random digit dial (RDD) telephone surveys of households in the United States. The 2005 administration (NHES:2005) was conducted by Westat from January 3 through April 24, 2005. In the NHES:2005 Screener, household members were enumerated and demographic and educational information that determined eligibility for the three distinct topical surveys was collected. The NHES:2005 surveys are as follows:

- Early Childhood Program Participation Survey (ECPP-NHES:2005), which gathered information on the nonparental care arrangements and educational programs of preschool children, consisting of care by relatives, care by persons to whom they were not related, and participation in day care centers and preschool programs including Head Start;
- After-School Programs and Activities Survey (ASPA-NHES:2005), which addressed relative and nonrelative care during the after-school hours of elementary and middle school-age children, as well as participation in school-based and center-based after-school programs, after-school activities, and self-care; and
- Adult Education Survey (AE-NHES:2005), in which data were collected about participation in the following types of formal adult educational activities: English as a second language, basic skills and high school completion, postsecondary degree and diploma programs, apprenticeships, work-related courses, and personal interest courses. Information on informal learning activities for personal interest was gathered as well.

Three populations of interest corresponded to the three surveys that composed NHES:2005:

- Children from birth through age 6 who were not yet enrolled in kindergarten or above, of interest in either the infant/toddler path (ages 0 through 2) or the preschool path (ages 3 through 6) of the ECPP-NHES:2005 survey;
- School-age children in kindergarten through grade 8, up to age 15, of interest in the ASPA-NHES:2005 survey; and
- Adults (persons age 16 or older), who were not enrolled in grade 12 or below, not institutionalized, and not on active duty in the U.S. armed forces, of interest in the AE-NHES:2005 survey.

This manual, the *National Household Education Surveys Program of 2005: Public-Use Data File User's Manual, Volume II, Early Childhood Program Participation Survey*, provides documentation and guidance for users of the data file for the ECPP-NHES:2005 survey. This volume contains a description of the content and organization of the data file, including useful information regarding questionnaire items and the various derived variables found on the file. The reader should especially note the discussion of data considerations and anomalies in chapter 7. Included as appendixes are the data file layout, SAS code that was used to create derived variables, and the codebook for the ECPP-NHES:2005 data file.

Volume II is meant to be read in conjunction with Volume I of the *National Household Education Surveys Program of 2005: Public-Use Data File User's Manual*. More information about the

purpose of the study, the sample design, the ASPA and AE surveys, the data collection instruments, and data collection and data processing procedures is contained in Volume I. Detailed information about ASPA-NHES:2005 and AE-NHES:2005 can be found in Volumes III and IV, respectively.

Some users of the ECPP-NHES:2005 survey data may wish to make comparisons with data from the Early Childhood Program Participation Survey of NHES:2001. Therefore, it is important to point out some differences between the different survey administration years. Some items from ECPP-NHES:2001 were dropped in 2005. Items were dropped largely due to lack of utility reported by experts, low variability, and time restrictions. The most significant change from 2001 was that items confirming the type and number of arrangements were dropped from ECPP-NHES:2005. Other items dropped included questions about congruence of parental beliefs with those of the caregiver, amount of time to travel to the arrangement, number of caregiver changes since September, parental preference to stay at home with the child, parents' perceptions of the quality of child care, and items about training and support for families of preschoolers.

In 2005 some new items were added to the survey. Additions include a new question in the Selection of Care and Difficulty Finding Care section asking parents to rate the importance of certain factors in the selection of child care. Also, two questions were added in the Mother and Father Characteristics sections about work schedules. Questions were added to the Household Characteristics section asking about arrangement of parental work schedules for child care, and whether any household members worked in the child care profession.

## 6. GUIDE TO THE DATA FILE AND CODEBOOK

### 6.1 Content and Organization of the Data File

This section describes the content of the public-use data file constructed for the Early Childhood Program Participation Survey of the 2005 National Household Education Surveys Program (ECP-P-NHES:2005), which includes data from interviews completed with parents of 7,209 children, of whom 3,855 were infants or toddlers and 3,354 were preschoolers. This file contains data from all completed ECPP interviews. There is one record for each ECPP interview; therefore, the file contains 7,209 cases. The file is organized so that logically related sets of variables are grouped together. The data items are listed in the file in the following order: system variables, household membership variables, questionnaire item variables, household characteristics variables, derived variables, weighting and variance estimation variables, and imputation flag variables.

A list of all the variables in the data file is shown in appendix D. The VARIABLE NAME column displays the unique identifier for each variable in the data file. Identical variables that are part of a repeating segment are differentiated by a numeric value at the end of the variable name in the data file (e.g., RCPLACE1, RCPLACE2...). The VARIABLE LABEL column displays a short description associated with the variable. The FORMAT column indicates if a variable has a numeric ("N") or a character ("C") format. The LENGTH column indicates the columns of data the variable takes up on the data file. The length descriptor also includes the number of digits found after the decimal point for noninteger numeric variables (e.g., weight variables). The position of the variable on the file is indicated in the START and END columns.

The value "-1" for any variable on the file indicates that a case was part of a legitimate skip. For example, if the respondent answered that the child currently receives regularly scheduled care from a relative at least once a week (RCWEEK1), she or he would not be asked if the child receives regularly scheduled care at least once a month (RCMONTH1), and that variable would contain a value of -1 for the case. Analysts may want to recode these cases to facilitate their analyses. For example, in a study of the average cost to households for center-based program arrangements, the -1 cases for CPCOST1 (How much does your household pay for child to go to that program, not counting any money that you may receive from others to help pay for care?) could be set to \$0.00 for respondents who said no to CPFEE1 (Is there any charge or fee for this program, paid by you or some other person or agency?).

The data file is provided on CD-ROM and is available on the Internet at <http://nces.ed.gov/nhes>.

#### 6.1.1 System Variables

Each record starts with variables for case identification numbers: BASMID and BASEID. Following the identification variables is MAINRSLT, which identifies the completion status of the interview and the interview path (e.g., preschool, elementary, etc.), and ENGLSPAN, which tells whether the interview was conducted in English or Spanish.

**BASMID** is the unique 12-digit identifier variable for the interview. It is composed of the 8-digit household identifier, the 2-digit household member person number of the subject of the interview, and the final 2-digit interview number, which in the NHES:2005 surveys is always 01.

**BASEID** is the eight-digit identifier for the household. This ID number forms the first eight digits of ID numbers for other interviews in the household.

**MAINRSLT** (main result) is the variable that holds the final completion code for the interview.

The values for MAINRSLT in the ECPP file are as follows:

- CI = Complete ECPP interview; sampled child was an infant or toddler (newborn through age 2)
- CN = Complete ECPP interview; sampled child was a preschooler (3 through 6 years old and not yet enrolled in kindergarten)

**PATH** is the variable that designates classes of cases based on certain characteristics (e.g., age) that drive similar skip patterns within the interview. Though PATH is essentially the same as MAINRSLT, because of its importance in navigating the questionnaire, it is included on the data file to help users match the data file against the questionnaire. For the ECPP interview, there are two paths:

- I = Infant/toddler path; sampled child was newborn through age 2
- N = Preschool path; sampled child was a preschooler (age 3 through 6 and not yet enrolled in kindergarten)

**ENGLSPAN** is the variable that indicates whether the interview was conducted in English or in Spanish.

The values for ENGLSPAN are as follows:

- 1 = Interview was conducted in English
- 2 = Interview was conducted in Spanish

### 6.1.2 Household Membership Variables

All household members were enumerated in either the Screener or the ECPP survey. Data collected for each household member included age and sex (age and sex were collected at the screener level (item S6) or extended level (item PA3)<sup>1</sup>), and relationship to the child (PA4). The sex information collected during the household enumeration was used to drive the sex-based wording of subsequent questions throughout the ECPP survey. If the respondent relationship was recorded as mother or father, an additional question (PA5 or PA6) was asked to ascertain the specific relationship (e.g., birth, adoptive, step, foster, other parent/guardian, or partner of parent) of the mother and/or father living in the household to the subject child.

---

<sup>1</sup> The variables SEX(n) and AGE(n) include data from both S6 and PA3.

The household member information is stored on the data file in the following order: information about the subject of the interview (the sampled child), information about the ECPP interview respondent (the most knowledgeable parent/guardian<sup>2</sup>), information about the mother, information about the father, and information on all other household members (other than the subject, the mother, and the father). Please note that the interview respondent information is repeated in one of two places. If the interview respondent is the mother or female guardian, or the father or male guardian, information is contained in the respondent section and that information will be repeated in the mother or father section. If the interview respondent is not the mother or female guardian, or the father or male guardian, the information will be repeated in the section on other household members. The household membership variables appear on the data file as follows:

**AGE2004** is the sampled child's age as of December 31, 2004.

**SEX** is the sex of the sampled child.

**RESPAGE** is the extended interview respondent's age.

**RESPSEX** is the extended interview respondent's sex.

**RESRELN** is the extended interview respondent's relationship to the sampled child.

**MOMAGE1** is the age of the child's mother or female guardian. In cases where there are two mothers or female guardians, **MOMAGE2** is the age of the other mother or female guardian.

**MOMTYPE1** is the type of mother (birth, adoptive, step, foster, other parent or guardian or female partner of parent). In cases where there are two mothers or female guardians, **MOMTYPE2** is the type of the other mother or female guardian.

**DADAGE1** is the age of the child's father or male guardian. In cases where there are two fathers or male guardians, **DADAGE2** is the age of the other father or male guardian.

**DADTYPE1** is the type of father (birth, adoptive, step, foster, other parent or guardian, or male partner of parent). In cases where there are two fathers or male guardians, **DADTYPE2** is the type of the other father or male guardian.

**AGE1** is the age of the oldest household member other than the sampled child and parents.

**SEX1** is the sex of the oldest household member other than the sampled child and parents.

**RELATN1** is the relationship to the child of the oldest household member other than the sampled child's parents.

**AGE(n)**, **SEX(n)**, and **RELATN(n)** variables are repeated for each other household member in descending order of age using sequential numbers (e.g., AGE2, SEX2, RELATN2), and so on up to a maximum of seven other household members.

---

<sup>2</sup> Respondents need not have been parents or legal guardians. The household member most knowledgeable about the child's care and education was identified by the Screener respondent and selected to respond to the survey. The respondent was usually, but not always, a parent.

### 6.1.3 Questionnaire Item Variables

Most questionnaire item variables appear on the file in the same order as they were asked. The items on enrollment and grade in school appear in the Screener and the ECPP interview. The responses given by the parent/guardian most knowledgeable about the sampled child, whether in the Screener or in the ECPP interview, are contained on the data file.

Some variables have been excluded from the public-use data file for confidentiality reasons. These include the names of household members, verbatim string responses, which might identify persons or places, and the individual ZIP Codes. Some of these variables are included in a separate restricted-use data file (see section 6.3). The ECPP survey questionnaire appears with the Screener, the ASPA survey questionnaire, and the AE survey questionnaire in Volume I, appendix A; variable names are provided to the left of each question. Those followed by “/R” appear only on a restricted-use data file that may be obtained through a special licensing agreement with the National Center for Education Statistics (NCES). Go to the NCES website at <http://nces.ed.gov/pubsearch/licenses.asp> to learn more about obtaining a restricted-use license.

“Code all that apply” questions allowed the respondent to select more than one of the answer categories given. As the responses were given, the interviewer coded the number appearing on the screen that corresponded to each response given. The numbered responses were recoded into one variable for each response category. If the respondent gave the particular response, the associated variable was coded “yes.” Otherwise, the associated variable was coded “no.” There are three “code all that apply” questions in the ECPP survey: “How did you learn about that program/this person as a care provider for (CHILD)?” (EE17 and EG17), and “What is your (CHILD)’s race? You may name more than one. Is (he/she)...” (PTB3).

**ARRGMOST** is the arrangement displayed in the statement that leads into the variables DLOCA, DCOST, DRELY, DLERN, DCHIL, DHROP, and DNBGRP (“You said that (CHILD) receives care from (his/her) (RELATIVE/a nonrelative/ a program in (LOCATION)) for (NUMBER) hours per week, (NUMBER) days per week, and (NUMBER) weeks per month. Please respond to the next questions thinking about that arrangement.”) Using the information provided by the parent or guardian, the computer calculated the arrangement in which the subject child spent the most time per week on average and that display was called ARRGMOST. If a child had no arrangements or only one arrangement, ARRGMOST was set to -1. Please see chapter 7 (Data Considerations and Anomalies) for exceptions.

### 6.1.4 Household Characteristics Variables

Household characteristics variables are variables that reflect characteristics of the household as a unit. These questions were asked at the end of the first interview in the household. For example, questions were asked about whether the home was owned or rented (HOWNHOME), and whether the family received food stamps in the past 12 months (HFOODST). These household items appear on the file in the same order as they were asked.

### 6.1.5 Derived Variables

Derived variables were developed and included in the data file to aid users in their analyses. The derived variables fall into three categories: questionnaire item variables, counter variables, and variables linked to other data sources. Questionnaire item-derived variables were created by combining two or more items from the questionnaire. Household counter-derived variables were created by counting the number of persons enumerated in the household with specific characteristics. Linked-derived variables were created by using the respondent's ZIP Code to extract data from the 2000 Census of Population Summary File SF3.

The derived variables appear together on the file in their own section in alphabetical order. They are listed below in the same order with an explanation of how they were derived. Because derived variables are in alphabetical order, those that are substantively related may not be proximate to one another either on the file or in this discussion. The actual SAS code to create these variables is found in appendix E with the exception of household counter variables, which were created in computer-assisted telephone interviewing (CATI), and CENREG (Census region), which was drawn from the sampling frame. All unique NHES:2005 ZIP Codes were matched to ZIP Codes on the SF3 to determine urbanicity, the percentage of Black or Hispanic residents in the ZIP Code, and the percentage of persons under age 18 in the ZIP Code living in poverty. The ECPP derived variables are as follows:

**ALLGRADE** identifies the enrollment status, the grade level of children in graded schools, and the grade-level equivalent for children in ungraded schools, special education programs, or home school. **ALLGRADE** was created using the variables **GRADE** (PB6) and **GRADEEQ** (PB7) and reflects the enrollments based on these two items. **ALLGRADE** does not reflect all participation in center-based programs. (Center-based program participation is captured in the variable **CPNNOW**.)

The values for **ALLGRADE** are as follows:

0 = Not enrolled

N = Nursery/preschool/prekindergarten/Head Start

**ANYCARE** indicates whether the child currently participates in any nonparental care or program arrangements. **ANYCARE** was created using the variables **RCNOW** (ED1), **NCNOW** (EE1), and **CPNNOW** (EG1).

The values for **ANYCARE** are as follows:

1 = Currently participates in any care or program arrangement

2 = Does not currently participate in any care or program arrangement

**ANYCARE2** indicates whether the child currently participates in any nonparental care or program arrangements at least once each week. **ANYCARE2** was created using the variables **RCWEEK1-RCWEEK4** (ED5), **NCWEEK1-NCWEEK4** (EE5), and **CPWEEK1-CPWEEK4** (EG6).

The values for ANYCARE2 are as follows:

- 1 = Currently participates in any care or program arrangement that occurs at least once each week
- 2 = Does not currently participate in any care or program arrangement that occurs at least once each week

**CAREHOUR** is the total number of hours per week spent in nonparental care arrangements or programs. For arrangements that take place less often than every week, but at least once each month, CAREHOUR reflects the *average* number of hours each week (i.e., the number of hours each week times the number of weeks each month divided by four). Children whose only arrangements take place less often than once each month are coded 0 hours on this variable, as are children in no care or program arrangements.

CAREHOUR was derived for ECPP using RCHRS1-RCHRS4 (ED8), NCHRS1-NCHRS4 (EE8), and CPHRS1-CPHRS4 (EG9) for weekly arrangements, and RCWKMO1-RCWKMO4 (ED9), RCHRWK1-RCHRWK4 (ED11), NCWKMO1-NCWKMO4 (EE9), NCHRWK1-NCHRWK4 (EE11), CPWKMO1-CPWKMO4 (EG10), and CPHRWK1-CPHRWK4 (EG12) for monthly arrangements.

**CENREG** identifies the census region in which the subject child lives. This variable was drawn from the sampling frame.

The following states and the District of Columbia are in each census region:

Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT  
South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV  
Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI  
West: AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY

The values for CENREG are as follows:

- 1 = Northeast
- 2 = South
- 3 = Midwest
- 4 = West

**CPARRNEW** is the counter-derived variable that indicates the total number of center-based program arrangements in which a sampled child participates. It takes into account arrangements that were deleted ("NOW SAYS NO OTHER CENTER-BASED ARRANGEMENT") or added at EG26 ("Does (CHILD) go to another day care center, preschool, prekindergarten, or (Early) Head Start program?").

**DADEDUC** is a measure of the educational attainment of the child's father or male guardian. Items included in this derived variable were DADGRADE (PV6) and DADDIPL (PV7).

The values for DADEDUC are as follows:

- 1 = No father or male guardian for the subject child in the household
- 1 = Less than high school diploma
- 2 = High school graduate or equivalent
- 3 = Vocational/technical education after high school or some college
- 4 = College graduate
- 5 = Graduate or professional school

**DADEMPLD** indicates the employment status of the father (birth/adoptive/step/foster/male guardian). Items included in this derived variable were DADWORK (PV8), DADLEAVE (PV9), DADHOURS (PV10), DADLOOK (PV14), DADAGN (PV15a), DADEMPL (PV15b), DADREL (PV15c), and DADANSAD (PV15d).

The values for DADEMPLD are as follows:

- 1 = No father or male guardian for the subject child in the household
- 1 = Working 35 hours or more per week
- 2 = Working less than 35 hours per week
- 3 = Looking for work
- 4 = Not in the labor force

**DISABLT** indicates whether the sampled child has a disability, based upon affirmative responses to any items in PT2 and PT3, excluding the items pertaining to autism, attention deficit disorder (ADD or ADHD), and pervasive developmental disorder (PDD) in PT2.

The values for DISABLT are as follows:

- 1 = Currently has a disability
- 2 = Does not currently have a disability

**DISBLTY2** indicates whether the sampled child has a disability based upon affirmative responses to any items in PT2 and PT3, including the items pertaining to autism, attention deficit disorder (ADD or ADHD), and pervasive developmental disorder (PDD) in PT2.

The values for DISBLTY2 are as follows:

- 1 = Currently has a disability
- 2 = Does not currently have a disability

**FAMILY** consists of a set of family type categories using both parent and sibling information. It is created using HHPARN1 and NUMSIBS, which are other derived variables. Nonparent guardians are included in the "other" category. Nonparent guardians are persons other than mothers and fathers (birth, adoptive, step, or foster), such as grandparents, aunts, or uncles. Households comprised of same-sex parents or partners of parents are not included in the two-parent household categories in this derived variable.

The values for FAMILY are as follows:

- 1 = Two parents and sibling(s)
- 2 = Two parents, no sibling
- 3 = One parent and sibling(s)
- 4 = One parent, no sibling
- 5 = Other

**FAMILY05** consists of a set of family type categories using both parent and sibling information. It is created using HHPARN05 and NUMSIBS, which are other derived variables. Nonparent guardians are included in the “other” category. Nonparent guardians are persons other than mothers and fathers (birth, adoptive, step, or foster, and same-sex parents or partners of parents), such as grandparents, aunts, or uncles. Households comprised of opposite-sex parents or same-sex parents or partners of parents are included in the two-parent household category in this derived variable (see the description for HHPARN05).<sup>3</sup>

The values for FAMILY05 are as follows:

- 1 = Two parents and sibling(s)
- 2 = Two parents, no sibling
- 3 = One parent and sibling(s)
- 4 = One parent, no sibling
- 5 = Other

**HHDAD** indicates whether the birth, adoptive, step, or foster father or male guardian or partner of the parent of the subject child resides in the household with him/her. This variable was created using variables DADTYPE1 (PA6), DADTYPE2 (PA6), MOMTYPE1 (PA5), and MOMTYPE2 (PA5). If more than one mother or father were living in the household, the lowest value between MOMTYPE1 and MOMTYPE2 or DADTYPE1 and DADTYPE2 was used. If both same sex parents had the same value, MOMTYPE1 or DADTYPE1 was used in creating HHDAD.

The values for HHDAD are as follows:

- 1 = Birth or adoptive father
- 2 = Step, foster father, other parent/guardian, or male partner of parent
- 3 = Male respondent/no mother or father in household
- 4 = Other

**HHMOM** indicates whether the birth, adoptive, step, or foster mother or female guardian or partner of the parent of the subject child resides in the household with him/her. This variable was created using variables MOMTYPE1 (PA5), MOMTYPE2 (PA5), DADTYPE1 (PA6), and DADTYPE2 (PA6). If more than one mother or father were living in the household, the lowest value between MOMTYPE1 and MOMTYPE2 or DADTYPE1 and DADTYPE2 was used. If both same sex parents had the same value, MOMTYPE1 or DADTYPE1 was used in creating HHMOM.

---

<sup>3</sup>Prior to 2005, NHES did not include same or opposite sex partners of parents in the FAMILY variable. The FAMILY variable has been retained on the file to facilitate comparison to previous NHES collections.

The values for HHMOM are as follows:

- 1 = Birth or adoptive mother
- 2 = Step, foster mother, other parent/guardian, or female partner of parent
- 3 = Female respondent/no mother or father in household
- 4 = Other

**HHPARN1** designates the subject child's parents who reside in the household. It denotes a two-parent family, a one-parent family, or a family with nonparent guardians. This measure was derived from HHMOM and HHDAD, described earlier.

The values for HHPARN1 are as follows:

- 1 = Mother (birth, adoptive, step, or foster) and father (birth, adoptive, step, or foster)
- 2 = Mother (birth, adoptive, step, or foster) only
- 3 = Father (birth, adoptive, step, or foster) only
- 4 = Nonparent guardian(s)

**HHPARN05** designates the subject child's parents who reside in the household. It denotes a two-parent family, a one-parent family, or a family with nonparent guardians. This measure was derived from HHMOM and HHDAD, described earlier, and MOMTYPE1, MOMTYPE2, DADTYPE1, and DADTYPE2. Households comprised of opposite-sex parents or same-sex parents or partners of parents are included in the two-parent household category in this derived variable (see the description for FAMILY05).<sup>4</sup>

The values for HHPARN05 are as follows:

- 1 = Mother (birth, adoptive, step, foster, or female partner of parent) and father (birth, adoptive, step, foster, or male partner of parent), or two same-sex parents
- 2 = Mother (birth, adoptive, step, or foster) only
- 3 = Father (birth, adoptive, step, or foster) only
- 4 = Nonparent guardian(s)

**HH18OVER** is the counter-derived variable that indicates the number of household members age 18 and older.

**HHTOTAL** is the counter-derived variable that indicates the total number of household members.

**HHUNDR6** is the counter-derived variable that indicates the number of household members younger than age 6.

**HHUNDR10** is the counter-derived variable that indicates the number of household members younger than age 10.

---

<sup>4</sup> Prior to 2005, NHES did not include same or opposite sex partners of parents in the HHPARN1 variable. The HHPARN1 variable has been retained on the file to facilitate comparison to previous NHES collections.

**HHUNDR16** is the counter-derived variable that indicates the number of household members younger than age 16.

**HHUNDR18** is the counter-derived variable that indicates the number of household members younger than age 18.

**HHUNDR21** is the counter-derived variable that indicates the number of household members younger than age 21.

**LANGUAGE** describes the language(s) spoken most often at home by the parent(s)/guardian(s) in the household. This measure is derived from MOMLANG (PU3), MOMSPEAK (PU4), DADLANG (PV3), and DADSPEAK (PV4).

The values for LANGUAGE are as follows:

- 1= Both/only parent(s) learned English first or currently speak(s) English in the home
- 2= One of two parents learned English first or currently speaks English in the home
- 3= No parent learned English first and both/only parent(s) currently speak(s) a non-English language in the home

**MOMEDUC** is a measure of the educational attainment of the child's mother or female guardian. This measure is derived from MOMGRADE (PU6) and MOMDIPL (PU7).

The values for MOMEDUC are as follows:

- 1 = No mother or female guardian for the subject child in the household
- 1 = Less than high school diploma
- 2 = High school graduate or equivalent
- 3 = Vocational/technical education after high school or some college
- 4 = College graduate
- 5 = Graduate or professional school

**MOMEMPLD** indicates the employment status of the mother (birth/adoptive/step/foster/female guardian). This variable is derived from MOMWORK (PU8), MOMLEAVE (PU9), MOMHOURS (PU10), MOMLOOK (PU14), MOMAGN (PU15a), MOMEMPL (PU15b), MOMREL (PU15c), and MOMANSAD (PU15d).

The values for MOMEMPLD are as follows:

- 1 = No mother or female guardian for the subject child in the household
- 1 = Working 35 hours or more per week
- 2 = Working less than 35 hours per week
- 3 = Looking for work
- 4 = Not in the labor force

**MOMFTFY** indicates if the mother (birth, adoptive, step, or foster) or female guardian currently works full time and has worked 12 months during the past year. While this measure has some limitations since it is not known if the mother was employed full time (35 hours per week or more) for the entire year, it is consistent with a measure created from the CPS to classify mothers as full time, full year labor force participants. This variable was constructed using MOMWORK (PU8), MOMEMPLD, a derived variable, and MOMMTHS (PU13).

The values for MOMFTFY are as follows:

- 1 = No mother or female guardian for the subject child in the household
- 1 = Full time and full year
- 2 = Less than full time or less than full year
- 3 = Not employed during past year

**MOSTHRS** indicates the nonparental care or program arrangement (other than school) in which the child spends the most hours per week. Arrangements that take place less often than every week but at least once each month were included in the derivation of this variable using the following procedures: the number of hours each month was divided by 4 (weeks) to obtain the *average* number of hours per week; this average was then eligible to be classified as the arrangement with the most hours per week. Children whose only arrangements take place less often than once each month are coded 0 on this variable.

MOSTHRS was derived using RCHRS1-RCHRS4 (ED8), NCHRS1-NCHRS4 (EE8), and CPHRS1-CPHRS4 (EG8) for weekly arrangements, and RCWKMO1-RCWKMO4 (ED9), RCHRWK1-RCHRWK4 (ED11), NCWKMO1-NCWKMO4 (EE9), NCHRWK1-NCHRWK4 (EE11), CPWKMO1-CPWKMO4 (EG10), and CPHRWK1-CPHRWK4 (EG12) for monthly arrangements. If the arrangement with the most hours was a relative or nonrelative care arrangement, RCPLACE1-4 and NCPLACE1-4 were used to determine whether the care took place in the child's home or another home.

The values for MOSTHRS are as follows:

- 1 = No nonparental care arrangement/program
- 1 = Relative care in child's home
- 2 = Relative care in another home
- 3 = Nonrelative care in child's home
- 4 = Nonrelative care in another home
- 5 = Center-based program
- 6 = Equal hours in 2 or more types of care

Note that the number of cases for whom MOSTHRS = 0 does not equal the number of cases for whom ANYCARE = 2. This is because cases whose only arrangements take place less often than once each month are coded 1 on ANYCARE and 0 on MOSTHRS.

**NCARRNEW** is the counter-derived variable that indicates the total number of nonrelative care arrangements in which a sampled child participates. It takes into account arrangements that were deleted ("NOW SAYS NO OTHER NONRELATIVE ARRANGEMENT") or added at EE27 ("Does (CHILD) have another care arrangement in a private home with a nonrelative on a regular basis?").

**NUMSIBS** is the counter-derived variable that indicates the total number of siblings with whom the sampled child lives. The responses to RELATN1-RELATN7 (PA4) were counted for this variable.

**PARGRADE** indicates the highest level of education for the subject child's parents or nonparent guardians who reside in the household. The items included in this derived variable were DADGRADE (PV6), DADDIPL (PV7), MOMGRADE (PU6), and MOMDIPL (PU7).

The values for PARGRADE are as follows:

- 1 = Less than high school diploma
- 2 = High school graduate or equivalent
- 3 = Vocational/technical education after high school or some college
- 4 = College graduate
- 5 = Graduate or professional school

**RACEETHN** denotes both the race and ethnicity of the child. If the respondent designated the child's ethnicity as Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as White, Black, or another race. Items included in this derived variable are CHISPAN (PTB2), CWHITE, CBLACK, CAMIND, CASIAN, CPACI, and CRACEOTH (PTB3).

The values for RACEETHN are as follows:

- 1 = White, non-Hispanic
- 2 = Black, non-Hispanic
- 3 = Hispanic
- 4 = All other races and multiple races, non-Hispanic

**RACEETH2** indicates the race and ethnicity of the child with more detail than RACEETHN. Specifically, Asian/Pacific Islander origin is categorized separately in this derived variable. Items included in this derived variable are CHISPAN (PTB2), CWHITE, CBLACK, CAMIND, CASIAN, CPACI, and CRACEOTH (PTB3).

The values of RACEETH2 are as follows:

- 1 = White, non-Hispanic
- 2 = Black, non-Hispanic
- 3 = Hispanic
- 4 = Asian or Pacific Islander, non-Hispanic
- 5 = All other races and multiple races, non-Hispanic

**RCARRNEW** is the counter-derived variable that indicates the total number of relative care arrangements in which a sampled child participates. It takes into account arrangements that were deleted ("NOW SAYS NO OTHER RELATIVE ARRANGEMENT") or added at ED23 ("Does (CHILD) have another care arrangement with a relative on a regular basis?").

**Linked ZIP Code variables.** These variables provide information on the characteristics of the ZIP Code area in which the child's household is located, using data from the 2000 Census of Population Summary File SF3.

**ZIP18PO2** is a linked-derived variable that categorizes the percentage of families in the subject's ZIP Code who have children under age 18 and had incomes in 1999 below the poverty line.

The values for ZIP18PO2 are as follows:

- 1 = Less than 5 percent
- 2 = 5 to 9 percent
- 3 = 10 to 19 percent
- 4 = 20 percent or more

**ZIPBLHI2** is a linked-derived variable that categorizes the percentage of persons in the subject's ZIP Code in 2000 who were Black or Hispanic.

The values for ZIPBLHI2 are as follows:

- 1 = Less than 6 percent
- 2 = 6 to 15 percent
- 3 = 16 to 40 percent
- 4 = 41 percent or more

**ZIPURB** is a linked-derived variable that categorizes the subject's ZIP Code as urban or rural. The "urban" classification comprises all areas located within an urbanized area (UA) or urban cluster (UC). The "rural" classification comprises all areas outside of UAs and UCs. The specific density and distance requirements for UAs and UCs are defined in the *Federal Register*, Vol. 67, No. 84.

Since a ZIP Code can cut across geographic areas that are classified into either or both of the two categories, the ZIPURB variable is defined as the category that had the largest number of persons in 2000, based on data from the 2000 Census of Population. For example, if a ZIP Code has 5,000 persons in areas in the urban category and 1,200 persons in areas in the rural category, it is assigned a ZIPURB code of 1 ("Urban").

The values for ZIPURB are as follows:

- 1 = Urban
- 2 = Rural

## **6.1.6 Weighting and Variance Estimation Variables**

The first variable in this section of the file is FEWT. It is the variable that should be used as the weight variable to estimate the characteristics of children. This weight contains all of the adjustments for the probabilities of selection, nonresponse, and undercoverage as described in Volume I, chapter 3 of this manual.

The 80 replicate weights, FEWT1 to FEWT80, are the next variables in this section. These replicate weights can be used by various statistical software packages, like WesVar (using the JK1 method), SUDAAN, Stata, and AM, to produce estimates of the sampling errors of the estimates. More details on how the replicate weights were created and how they can be used are given in Volume I, chapter 3.

The remaining two variables in this section are EPSU and ESTRATUM. These variables are provided to enable users to compute sampling errors using Taylor Series approximations, such as the SUDAAN procedure (Shah et al. 1995). The methods used to construct the values for EPSU and ESTRATUM are also discussed in Volume I, chapter 3. Volume I, chapter 3 also contains information about calculating approximate sampling errors without using replication or Taylor-series procedures; the approach for calculating approximate sampling errors does not require specialized software for complex survey data analysis.

### **6.1.7 Imputation Flag Variables**

Item nonresponse occurred when some, but not all, of the responses were missing from an otherwise cooperating respondent. To help users of the NHES:2005 data, the missing data were imputed, that is, obtained from a donor case using statistical procedures. For each variable on the ECPP file with imputed data, an imputation flag variable was created. This flag can be used to identify imputed values. If there is no imputation flag, then no imputation was performed on that variable. In Volume I, section 3.7, the meaning of values assigned to the imputation flags is discussed.

The naming convention for the imputation flag variables is to drop the last letter of the variable name and replace it with an "F." For example, the imputation flag for SEX is SEF. This naming convention holds true for all ECPP variables except for two types of cases; variables that originally end in "F" or would be confused with other variables if the last letter were to be dropped; and variables that end in a number. In the first instance, an "F" is added to the end of the variable name and a letter prior to the original ending "F" is dropped if necessary to limit the flag name to eight characters. For example, the flag for the variable FOCRAFTS is FOCRAFTF and the flag for the variable FOCRAFTN is FOCRAFNF. In the second instance, the letter immediately preceding the number is dropped and replaced with an "F." For example, the imputation flag for RCWEEK1 (ED5) is RCWEEF1. The imputation flags appear on the file in the same order as the variables to which they refer.

### **6.1.8 Numeric and Character Variables**

All of the variables in the ECPP survey file except MAINRSLT, PATH, GRADE, GRADEEQ, PCHDTYP1-PCHDTYP4, ARRGMOST, and ALLGRADE have numeric formats.

## **6.2 Guide to the Codebook**

The codebook, shown in appendix F, contains complete descriptions of the contents of the data file. The codebook contains system variables, household membership variables, questionnaire

variables, household characteristic variables, derived variables, weighting and variance estimation variables, and imputation flag variables. The codebook provides all the pertinent information for the variables in the file, including the variable name, the question wording, the position and format of the variable in the file, and the responses to the item. The unweighted frequency, unweighted percentage, weighted frequency, and weighted percentage are provided with each response. Figure 6-1 provides a description of each of the items appearing in a codebook entry.

### **6.3 Public-Use and Restricted-Use Data Files**

This manual is designed to assist users of the public-use ECPP data file. The public-use file contains all the variables detailed here but does not contain certain variables excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses, which might identify persons, and respondents' individual ZIP Codes (STFZIP). All data contained on the public-use data file, and some of these variables (e.g., verbatim strings of other-specify categories, STFZIP) that are excluded from the public-use data file, are included on a separate restricted-use data file. Variables that appear only on the restricted-use data file are indicated with "/R" on the ECPP questionnaire in Volume I, appendix A. The restricted-use data file also contains additional ZIP Code variables from the 2000 Census of Population Summary File 3 (SF3) that were used in the creation of the ZIP Code variables that appear on the public-use data file. The restricted-use data file may be obtained through a special licensing agreement with NCES. Go to the NCES website at <http://nces.ed.gov/pubsearch/licenses.asp> to learn more about obtaining a license.

**Figure 6-1. Example of the codebook format**

(1) **ED5. Is the care that (CHILD) receives from (his/her) (RELATIVE) regularly scheduled at least one each week?**

(2) **Variable Name :** RCWEEK1                      ED5–REL CARE REG SCHED ONCE/WEEK-1

(3) **Record Number :** 1

(4) **Position :** 123-124

(5) **Format :** N2.

(6) Response	(7) Codes	(8) Frequency	(9) Percent	(10) Weighted Frequency	(11) Weighted Percent
1 YES	1	1,493	20.7	4,285,927	92.8
2 NO	2	109	1.5	331,150	7.2
RESERVED CODE : -1 INAPPLICABLE	-1	5,607	77.8	16,073,859	
		7,209	100.0	20,690,936	100.0%

**DESCRIPTIONS:**

- (1) Questionnaire number and question wording: This is the exact question wording as it appeared in the questionnaire.
- (2) Variable Name: This is the variable name associated with each item. It is the unique identifier present in the SAS, SPSS, or STATA data file. The variable name is followed by a short label, which is associated with each of the variables. This label also appears in the SAS, SPSS, or STATA data file. Labels contain the questionnaire item numbers. Labels that begin with the letter “D” indicate a derived variable.
- (3) Record: Record number gives the record on which the variable is located.
- (4) Position: This provides the starting and ending position of the variable in the raw data file.
- (5) Format: This provides the variable type, its width, and the number of positions after the decimal point, if necessary. A data type of “N” represents numeric variables and “C” represents character variables. In this example, RCWEEK1 is a numeric variable with a length of 2 and no decimals.
- (6) Response: This column provides the response categories for the variable.
- (7) Codes: This column provides the actual numeric/character codes present in the data files.
- (8) Frequency: This column displays the unweighted frequency counts for this variable. The counts for missing values are also included for the unweighted values.
- (9) Percent: This column displays the unweighted frequency counts from the previous column as percentages. This column also contains percentages for missing values.
- (10) Weighted Frequency: This column displays the frequency counts weighted up to the population.
- (11) Weighted Percent: This column displays the percentages of frequency counts weighted up to the population. This column does not include percentages for missing values.

## **7. DATA CONSIDERATIONS AND ANOMALIES**

The purpose of this section is to bring to the user's attention certain data considerations and data anomalies in the Early Childhood Program Participation Survey of the National Household Education Surveys Program (ECP-P-NHES:2005) data, to describe the nature of those anomalies, and, where appropriate, to identify possible means of taking them into account when analyzing the data. In most surveys some real or apparent inconsistencies are observed. These may result from unusual circumstances, respondent interpretations of the questions, or other factors. Those listed here were identified during the editing and review of these data and represent anomalies known at the time this manual was prepared. Other anomalies may exist in the data.

### **7.1 Data Considerations**

Data considerations are features of the data file of which users should be aware. In general, these are features of the questionnaire, survey procedures, or data file conventions that are documented here for the purpose of bringing them to the attention of analysts.

#### **7.1.1 Truncation of Age**

A very small percentage of adults are over the age of 90. Because such late age is a rare characteristic, age variables were truncated at 90 to protect respondent confidentiality. Persons whose ages were over 90 were coded as being 90 years of age. This top coding affected the AGE(n) variables and RCAGE1 in the ECPP data file.

#### **7.1.2 Parent/Guardian Characteristics**

Information was collected on parent/guardian characteristics in sections PU and PV of the ECPP survey. The mother items were asked when there was a mother (birth, adoptive, step, or foster) in the household or when there was no mother or father in the household but a female responded to the extended interview. In the latter case, the mother information pertains to the female respondent. Similarly, the father items were asked when there was a father (birth, adoptive, step or foster) in the household, or when there was no mother or father in the household but a male responded to the extended interview.

#### **7.1.3 Mothers' and Fathers' Specific Relationships to Subject Children**

There are several cases where the detailed relationships of mothers and fathers to the ECPP subject children are unusual. For example, in three cases, children were reported to have a birth mother and a foster father at home. Data users interested in foster parent relationships should exercise caution when using these cases. These are unusual situations, and these reported foster parents may not be foster

parents in the traditional sense, but rather a partner of the birth parent or perhaps some other type of guardian.

#### **7.1.4 Truncation of Hours Parents Work for Pay**

For the variables indicating the numbers of hours per week mothers and fathers usually work at their jobs, there were 6 cases with a value of 99 for MOMHOURS (PU10) and 4 cases with a value of 99 for DADHOURS (PV10). In these cases, either the respondents reported 99 hours or they reported a higher number of hours that was then truncated to 99 hours.

#### **7.1.5 Income to the Nearest Thousand Dollars**

In those households whose income category and household size indicated that they may have been at or below the poverty line, household income to the nearest thousand dollars was requested. As the values in the data file show, some respondents did not answer in thousands but gave somewhat more specific answers. Rather than lose this information, the exact response was retained. Researchers should keep in mind that this variable contains some values that were rounded to the nearest thousand and others that were not.

#### **7.1.6 Estimated Number of 5-Year-Olds**

As a standard practice in NHES, estimates are compared to other data sources to assess the reasonableness of the NHES weights. When this comparison was done, a discrepancy was found in estimates of the number of 5-year-olds. The estimate of 3,464,442 from NHES:2005 (ECPP and After-School Programs and Activities [ASPA] surveys combined) was considerably lower than the estimate of 3,867,123 from the Current Population Survey (CPS). The weighting procedures were reviewed to ensure that they had been correctly computed and applied, and no problems were found in the computation or application of the weighting adjustments. As described in section 3.4.2, concerns about the discrepancy between the NHES:2001 and CPS estimates of the total number of 5-year-olds resulted in a detailed investigation into the reasons for this and an evaluation of alternative sets of raking dimensions. Further details on this evaluation are given in chapter 7 of Nolin et al. (2004).

### **7.2 Data Anomalies**

Data anomalies include responses out of the expected range and real or apparent inconsistencies in the data. The following anomalies are documented here for the purpose of bringing them to the analyst's attention.

### **7.2.1 Time Spent Reading Each Day**

Parents who indicated that a family member read to their children some days or every day in the past week were asked how many minutes on each of the days the child was read to. The database allowed up to three digits for recording the number of minutes, with the maximum set at 120 minutes each day. Just over 2 percent of parents said their children were read to for more than 60 minutes, including 18 cases or 0.24 percent who were coded as reading to their child more than 120 minutes on each of the days the child was read to. When values above the 120 minute maximum were given by respondents and interviewers confirmed these values with respondents, these values were included in the data.

### **7.2.2 Hours of Participation in and Cost of Child Care Arrangements**

It is not uncommon for variables to contain values beyond the range of the majority of responses. Variables in the ECPP data file pertaining to the number of hours in care and the cost of the care arrangement do contain some relatively high values. However, it is important to note that online range edits were installed on the computer-assisted telephone interviewing (CATI) system for all the hours and cost items, so that interviewers were prompted to verify any response outside a reasonable range before it was finally entered. Also, all cases for which the total number of hours per week in care arrangements or programs (CAREHOUR, a derived variable) was greater than 70 hours were examined for errors such as duplicate arrangements. These types of errors could erroneously inflate the total number of hours per week. All errors found were corrected. However, 73 cases exceeding the 70-hour edit rule remain on the file. Data users should note that some of the outlying values for the hours of participation in care arrangements may involve situations in which children are cared for during an entire weekend, by grandparents, for example, or cases where a care provider lives in the household and provides routine child care, such as live-in relatives or a nanny. Thus, users may want to examine certain characteristics of children's arrangements (e.g., the type, location, and the number of days each week) before deciding on how to handle these outliers in their analyses.

### **7.2.3 Cost Associated with Head Start Arrangements**

An anomaly regarding the cost of arrangements occurred at PCHDCOST. When a respondent reported that an arrangement was a Head Start arrangement and also reported that there was a cost for the arrangement ( $n = 54$ ), clarification was requested at PCHDCOST. In a small number of cases, the respondent indicated that the program was not Head Start at this item ( $n = 12$ ). These data remain on the data file as reported as Head Start by the respondent. Analysts interested in Head Start participation should take PCHDCOST into account in their analyses.

### **7.2.4 Selection of Care**

The variable ARRGMOST is the variable that indicates which arrangement was selected for item EI1. Parents were asked to think about that specific arrangement while responding to questions

about the importance of various factors, like location or cost of care, in selecting that arrangement. The purpose of ARRGMOST in the ECPP data file is to indicate the arrangement displayed at EI1. If there were no child care arrangements or there was only one arrangement, then it was not necessary to clarify to the respondent which arrangement to consider when answering questions at EI1. In such cases ARRGMOST is not applicable and contains a value of -1. If there was more than one arrangement, the arrangement in which the child spent the most time, on average, per week was displayed. If a child had two arrangements in which he or she spent the same amount of time, an arrangement was randomly selected for the respondent to think about while responding to the questions. It is important to note that, after imputation, an arrangement other than that displayed at ARRGMOST could have greater weekly hours than the arrangement displayed at ARRGMOST.

## **APPENDIX E**

### **SAS CODE FOR DERIVED VARIABLES**

*This page intentionally left blank.*

SAS code for the ECPP derived variables is below, with the exception of household counter variables (HHTOTAL, etc.), which are derived prior to the creation of the data file; CENREG, which was drawn from the sampling frame; and linked variables (ZIP18PO2, ZIPBLHI2, and ZIPURB), which used the respondent's ZIP Code to extract data from the 2000 Census of Population Summary File 3.
